―― **Abstract** ――

This is the manifesto of the Dagstuhl Perspectives Workshop 10101. The goal is to describe the state-of-the-art in a field along with its shortcomings and strenghts. Based on this, position statements and perspectives for the future should be described. A manifesto typically has a less technical character; instead it provides guidelines and roadmaps for a sustainable organisation of future progress.

Executive Summary

This executive summary summarizes the perspectives discussed in the workshop. The workshop focused on

- important issues,
- relevant problems, and
- adequate solutions.

As a major result from the workshops, the following problems and roadmaps have been identified:

1. The problem of writing a brief, but concise executive summary.
2. The problem of collecting all abstracts from talks.
3. The problem of preparing summaries from working groups, open problem sessions, and panel discussions.

Providing an abstract of a talk may be helpful, but is not mandatory. Participants of Dagstuhl Perspectives Workshops are also asked to submit an abstract of their talks to the periodical *Dagstuhl Reports* [1] which is a series for documenting all events at Schloss Dagstuhl. Details are given in [2] and [3].
